

We Safeguard Your Business From Unpredictability

Enertect acts as the protector of your critical infrastructure. You can rely on our technology to shield your operations and data from the vagaries of the environment. We believe that the best way to prevent Battery and UPS problems is to monitor, detect, correct and prevent any failures from occurring.

Battery Monitoring Features

Enertect monitors and measures a wide range of parameters to keep your batteries protected

Voltage

Enertect monitors the battery terminal voltage of individual batteries which helps users to determine the health and performance of the batteries.

Ripple Voltage

Enertect measures the ripple voltage which occurs due to incomplete suppression of the alternating waveform within the power supply.

Internal Resistance

Enertect measures the internal resistance of individual batteries which helps the user predict the health of the batteries.

At Enertect, you select what you need to monitor

Battery Monitoring Packages

We offer six customisable Battery Monitoring packages where you can select exactly what you need to monitor. We are one of the few Battery Monitoring Vendors to measure the battery monitoring features in accordance with IEEE recommendations, providing you with a wide range of features to choose from. To see how you can leverage our expertise, click on the link below and download the datasheets to see which package is best suited for your organization.
